Professional Summary

I am an experienced Software Engineer 2 with strong proficiency in Java, Angular, Spring Boot, Microservices. I excel in developing scalable applications using object-oriented principles, and I thrive in Agile environments. With a proven track record in enterprise-level application design and implementation, I focus on delivering secure, efficient solutions that meet compliance and enhance operational performance.

Technical Expertise

Java, Spring boot, Javascript, Angular 21, My-SQL, Mongo-DB, DSA, Kafka, Docker, Oracle-DB, Hazelcast, OpenShift, Maven, Git/GitLab.

Professional Experience

Technical-Lead - Perfios Software Solutions – (02/2023 - Present)

- Led the UBI-DLP project, developed the feature, and managed the team to ensure successful delivery.
- Designed, developed, and maintained backend systems for Loan Origination System (LOS), building scalable RESTful APIs with Spring Boot and microservices architecture.
- Optimized database operations across MySQL, Oracle, and MongoDB, reducing query latency by 20% with indexing and caching using Redis.
- Secured API communications using JWT authentication, PII data masking, and encryption for third-party integrations.
- Managed GitLab CI/CD pipelines for automated deployments and deployed applications on OpenShift, achieving 30% faster release cycles while ensuring high availability, scalability, and zero-downtime deployments.
- Migrated Groovy APIs to Java, enhancing maintainability and performance with OOP principles and design patterns.
- Participated in code reviews, resolved UAT issues, and collaborated via GitLab to enhance sprint deliverables.

Software Engineer 2 Ernst N Young LLP – (08/2022 - 02/2023)

- Expanded integrated systems for Online Report Center, Online Template Management, and NMR, improving data communication across multiple modules, resulting in a 20% reduction in system integration time and enhanced operational efficiency.

Software Engineer Virtusa Consulting Services Private Limited - (08/2021 - 08/2022)

- Evolve microservices for Online Group Billing (OGB) system, reducing billing cycle time by 30% and optimizing operations.
- Implemented batch processing for OGB payment jobs, optimizing payment workflows, leading to 25% faster payment processing and 98% reduction in payment errors.

Software Engineer - Digital Harbor (01/2019 - 08/2021)

- Enhance microservices for the SET (Social Enterprise technology) platform (PaaS), enhancing the platform's scalability and reducing time-to-deployment by 35% for new features and services.
- Pioneered RGD on innovative ideas like Shape Detection and Web Sockets, resulting in new functionalities that improved real-time data processing and increased customer engagement by 79%.

Key Achievements

Video KYC – Personal Discussion

Developed a Banking Video Personal Discussion platform using **Angular, Java, WebSocket, and WebRTC**. Implemented real-time audio/video communication and signaling mechanisms, integrating with **STAN Server** for secure session management and scalable customer-advisor interactions.

Dynamic Form Generation Using JSON Logic

Grew a dynamic form system using JSON Logic, enabling real-time input rendering, input validation, and automated field creation for improved accuracy and efficiency.

DMS with PDF Conversion & Rendering

Enlarged an optimized DMS with office document-to-PDF conversion and smooth UI rendering using PDF.js.

Educational Qualification

Rajiv Gandhi Proudlyogiki Vishwavidyalaya
Bachelor of Engineering (CSE)

2014 - 2018
